FUNCTION: Receptor for TWFSF13/APRIL and TWFSF13B/TALL1/BAFF/BLYS that binds both ligands with similar high affinity. Mediates calcineurin-dependent activation of NF-AT, as well as activation of NF-kappa-B and AP-1. Involved in the stimulation of B- and T-cell function and the regulation of humoral immunity (By

ei- FUNCTION: THE KERATIN PRODUCTS OF MAMMALIAN EPIDERMAL DERIVATIVE
ei- FUNCTION: THE KERATIN PRODUCTS OF MICROFIBRILS EMBEDDED IN A RIGH
SUCH AS WOOL AND HAIR CONSIST OF MICROFIBRILS INCLUDE THE HIGH-
SULFUR AND HIGH-TYROSINE KERATINS, HAVING MOLECULAR WEIGHTS OF
6-20 kDa, WHEREAS THE MICROFIBRILS CONTAIN THE LARGER, LOW-SULFU
KERATINS (40-56 kDa).
TISSUE SPECIFICITY: CUTICLE LAYERS OF DIFFERENTIATING
HAIR FOLLICLES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           DOMAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    E9.5 AND E11.5, ABUNDANT EXPRESSION IN AER (THICKENED ECTODERMAL CELLS OF LIMB BUDS). AT E12.5, EXPRESSION IN THE LIMBS IS CONFINED TO THE CONDENSING MESENCHYM SURROUNDING THE CARTILAGE. AT THIS STAGE, STRONG EXPRESSION ALSO DETECTED IN VERTEBRAL AND FACIAL CARTILAGE PRIMORDIA AND IN THE MUSCLE OF THE TONGUE. AT E16.5, ABUNDANT EXPRESSION IN EPITHELIAL CELLS OF THE INTESTINAL VILLI. ISOFORM A IS MOST ABUNDANT AT ALL STAGES BUT SIGNIFICANT LEVELS OF ISOFORM A OCCUR AT E12.5.

DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Buropean Bioinformatics Institute. Keratin.
                                                                                                                                                                                                                                                   -I- FUNCTION: THE KERATIN PRODUCTS OF MAMMALIAN EPIDERMAL DERIVATIVES SUCH AS WOOL AND HAIR CONSIST OF MICROFIBRILS EMBEDDED IN A RIGID MATRIX OF OTHER PROTEINS. THE MATRIX PROTEINS INCLUDE THE HIGH-SULFUR AND HIGH-TYROSINE KERATINS, HAVING MOLECULAR WEIGHTS OF 6-20 kDa, WHEREAS THE MICROFIBRILS CONTAIN THE LARGER, LOW-SULFUR KERATINS (40-56 kDa).

KERATINS (40-56 kDa).

-I- MISCELLANBOUS: THE SOURCE OF THIS PROTEIN IS MERINO WOOL.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Keratin, high-sulfur matrix protein, IIIA3.

SUBCELLULAR LOCATION: EXTRACED LULAR:
TISSUE SPECIFICITY: FOUND IN THE BASEMENT MEMBRANES (MAJOR COMPONENT), S-LAMININ IS CONCENTRATED IN THE SYNAPTIC CLEFT OF THE NEUROMUSCULAR JUNCTION.

DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO INTERACT DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO STRUCTURE.

DOMAIN: THE ALPHA-HELICAL DOMAINS I AND II ARE THOUGHT TO STRUCTURE.

SIMILARITY: CONTAINS I LAMININ U-TERMINAL DOMAIN (DOMAIN VI).

SIMILARITY: CONTAINS 1 LAMININ DOMAIN IV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Comprising end.

    No. is the number of results predicted by chance to have a
re greater than or equal to the score of the result being printed,
is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                             seq

                                                                keratin high-sulfur matrix protein IIIA3 - sheep
NyAlternate names: M2.6 protein
Cispeciaes: Ovis crientalis aries, Ovis ammon aries (domestic sheep)
Cjactes: Ovis orientalis aries, Ovis ammon aries (domestic sheep)
Cjactesion: A02840
CjActesion: A02840
CjActesion: A02840
Ajritle: Studies on the high-sulphur proteins of reduced merino wool. Amino acid sequency
Ajritle: Studies on the high-sulphur proteins of reduced merino acid sequency
Ajritle: Studies on the high-sulphur proteins of reduced merino acid sequency
Ajritle: Studies on the high-sulphur protein and Ajritle: Studies on the high-sulphur protein and Ajritle: Studies on the high-sulphur protein and pair consist of microfibrils embedded in a rigid matrix of other protices of Superfamily: keratin high-sulfur matrix protein IIIA
Cj. Superfamily: keratin high-sulfur matrix protein IIIA
Cj. Keywords: duplication; hair
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C'Species: Homo sapiens (man)
